

Robust and Easy-to-Use Employee Communications Tool
to Power Your Intranet and Self-Service Initiatives

Cost-Effective Solution

Whether deployed on demand or as an installed application, Eprise provides measurable time to value.

Rapid Deployment

Eprise is built to get your intranet up and running and your team managing content quickly and easily.

Performance

Eprise is designed to handle impressively large amounts of users and site traffic. You can focus on other tasks knowing that Eprise can handle the load.

High Rate of Adoption

Eprise is designed to streamline the business process - not extend it - which improves quality and productivity.

SilkRoad Eprise™ is a communication solution that makes your organization more effective at delivering accurate, current information to everyone. Employee intranets and self-service applications can be a viable tool for fostering a collaborative work environment, and empowering employees to share and find information independently. They can provide a means to open and centralize all types of communication and information among all departments.

Intranets and self-service portals, available only to your current employee base, provide a way for you to extend your company's talent brand and corporate brand to your employees. A robust, easily updated and edited corporate intranet powered by Eprise can give your organization one central source for corporate, HR, and department-specific information, materials, guidelines or anything else you need employees to have access to. Often, corporate intranets become stale, cumbersome repositories of data; obsolete through lack of attention, staff enthusiasm or both.

Employee portals and intranets built on Eprise overcome these obstacles by enabling non-technical business users to manage content and web-based documents through easy-to-use editing tools that require no technical knowledge. Customizable security levels give you the ability to deliver targeted content to specific audiences, while protecting your critical intellectual property. In addition, flexible workflow and version control features allow you to distribute responsibility while maintaining control.

Giving You the Power To Communicate and Collaborate

Getting your intranet up and running is only the first step. The key to success with implementing a corporate intranet is to ensure that it is quickly adopted by your employees. Successful adoption is attained by deploying a solution that addresses the business process needs and provides high value to the user. Eprise is designed to streamline the business process - not extend it - creating a collaborative approach that succeeds in improving quality and productivity.

Easy-to-Use for Content Managers and Employees

Eprise is designed to be user-friendly, from the simple and straightforward installation of the software to the ability to easily manage your content. Since its inception in 1997, Eprise has focused on the end-user. Easy-to-use tools, makes it simple for content contributors to add or modify content delivered over your intranet. Our permission-based workflow ensures that no content is published until you're ready for it to be.

Deliver Relevant Content to Diverse Audiences

With Eprise, users see only what they are supposed to see and always view the most current versions. You identify the content owners, contributors and managers in your organization and assign roles that determine who can view, update and manage your intranet content. Using this information, Eprise dynamically manages and personalizes each content view, providing a customized experience for employees and strengthening the value of your intranet.

Manage Critical Corporate Documents for Employee Self-Service

Eprise also features an employee self-service document management system that allows you to publish and distribute even the most sensitive documents including tax forms, health insurance information and employee handbooks.

Rules and Triggers

Folders can have rules for data that is added to them. For example, a folder may be restricted to only allow PDF files. Further, when a document is dropped into a folder, events may be triggered. This includes prompting a user to enter metadata, notifying users of the new material or starting a workflow process.

Powerful Content Tools

Different types of content can be managed, each with their own security, metadata, field validation, workflow and more. Eprise offers core library services that are vital for any content in your system, document or a web page. These include check-in, check-out, version control, roll-back, metadata management and workflow. All of this functionality is accessible through any of the interfaces used to manage content.

Full-Text Searching

Eprise provides powerful search capabilities for your intranet that goes well beyond just searching document titles and metadata. A full index of the documents submitted into the system is created and keywords are dynamically created based upon the content of the document. These keywords are searchable along with the full-text of the documents. Like all content in Eprise, a user will only see search results for information they have permission to see.
